

Computational Photography

Here you will learn different OpenCV functionalities related to Computational Photography like image denoising etc.

- **Image Denoising**

See a good technique to remove noises in images called Non-Local Means Denoising

- **Image Inpainting**

Do you have a old degraded photo with many black spots and strokes on it? Take it. Let's try to restore them with a technique called image inpainting.

- **High Dynamic Range (HDR)**

Learn how to merge exposure sequence and process high dynamic range images.
